VOLUME 5, NO. 2

EXPLANATION OF FORMAT

The period covered by this issue of the bibliography corresponds to the same months of *Index Medicus*. The journal coverage is limited to journals covered by *Index Medicus*, but the *Endocrinology Index* contains additional subject headings that are not included in *Index Medicus*. The *Endocrinology Index* is arranged in seven sections: 1) Table of Contents; 2) Subject Section; 3) Review Section; 4) Method Section; 5) Author Section; 6) Subject Index; and 7) Author Index.

Subject Section

The Subject Section is for the reader interested in recent literature related to certain broad topics and is divided into eight categories (pituitary, thyroid, etc.). The endocrine pancreas has not been included since it is the subject of another recurring bibliography, *Diabetes Literature Index*. Each category has a preconceived hierarchical organization of subject headings. A particular citation may appear more than once if it deals with multiple topics. Each citation to an article contains the full title, first author, and journal reference. If the article is written in a foreign language, the language is indicated. If the citation is to a review article, the number of references is given.

Author Section

The Author Section provides the reader with a list of keywords or index terms assigned to each citation. Each article appears only once. The citations are arranged alphabetically according to first author and are numbered consecutively. These numbers are then in the Author and Subject Indexes to enable the r to identify references with ease. The complete cita (including index terms) are found but only the three authors are listed. Foreign titles appear i original language; these titles have been trans into English in the Subject Section. Following citation are index terms which have been assign describe the contents of the article. Index terms a in capital letters; some of these are accompanie subheadings which appear in lower case letters. A isks (*) identify the index terms under which ar appear in *Index Medicus*.

Subject Index

All of the index terms assigned to the citations ap ing in the bibliography are listed, followed by cit numbers which correspond to the numbers in the A Section. The Subject Index is included for the venience of the reader who wishes to select ar falling in categories of his own conception. Fo ample, one who is interested in protein binding particular hormone could quickly find whether were any articles dealing with this subject by dete ing if there were any citation numbers common t two headings "protein bindin" and the name o specific hormone.

Author Index

The names of all authors are listed, followed by cit numbers which correspond to the numbers in the A Section.

PREFACE

The *Endocrinology Index* is a bimonthly publication of the National Institute of Arthritis and Metabolic Diseases. This selected bibliography which is produced from the National Library of Medicine's Medical Literature Analysis and Retrieval System (MEDLARS), has been initiated to supply those scientists working in the field of endocrinology with a much needed current awareness tool and is intended to help facilitate greater integration of research and clinical efforts in this field.
